II.

Customer Statement of Requirements (5 points)

A minimum 3-page high-level narrative about the project.

This should describe informally, without the use-case jargon, motivation for your project, what kind of problem you are solving, and how this problem is solved in the current practice (before your proposed system gets deployed). Use a language familiar to your target users, and avoid technical jargon. Utilize charts, illustrations, and screen mock-ups to make it easier for the reader to understand the problem. Give exact references and URLs of any books, papers, URL's of the sources of information and tools used in the project, where to find more information or see existing solutions.

Enumerate all the requirements at the end of this section. Each requirement should briefly state what the user should be able to do using the system or what the system should do automatically, e.g., at periodic intervals.

Preliminary UI Design

Describe navigational paths that user will follow when interacting with the system. Show the screen mock-ups that the user will see and what parameters they'll need to enter.

III.

Plan of Work (8 points)

a. Estimate cost and resources

People, time, etc. Use at least 2 estimation techniques (e.g., process vs. problem-based estimation - see chapter 26). What system resources does your system depend upon? Examples are, screen display, disk storage, communication network, or you may be accessing some special sensor/instrument. Describe exact requirements for these resources in order for your system to run. For example, you need color display, with minimum resolution of 640×480 pixels; minimum of 2 Gb hard disk space; minimum network bandwidth 56 Kbps.

b. Identify schedules and milestones

List the projected milestones and dates by which you plan to accomplish them (see chapter 27). Preferably, you should use Gantt charts for planning and scheduling your project.

c. Project metrics

What metrics will you use to measure project status and avoid delays? (See chapter 25)

d. Effort breakdown

Provide the breakdown of responsibilities for each team member. List the names of modules and classes that each team member is responsible for developing, coding, and testing. Who will coordinate the integration? Who will perform the testing of the integrated system?

IV.

Project Risks (2 points)

List down the possible risks for your project. Use a risk table. (See chapter 28)

FIGURE 28.2

Sample risk
table prior to
sorting

Risks	Category	Probability	Impact	RMMM
Size estimate may be significantly low	PS	60%	2	
Larger number of users than planned	PS	30%	3	
Less reuse than planned	PS	70%	2	
End-users resist system	BU	40%	3	
Delivery deadline will be tightened	BU	50%	2	
Funding will be lost	CU	40%	1	
Customer will change requirements	PS	80%	2	
Technology will not meet expectations	TE	30%	1	
Lack of training on tools	DE	80%	3	
Staff inexperienced	ST	30%	2	
Staff turnover will be high	ST	60%	2
